Download Composer Latest: v1.9.0

Windows Installer

The installer will download composer for you and set up your PATH environment variable so you can simply call composer from any directory.

Download and run Composer-Setup.exe it will install the latest composer version whenever it is executed.

Command-line Installation

To quickly install Composer in the current directory, run the following script in your terminal. To automate the installation, use the guide on installing Composer programmatically.

```
php -r "copy('https://getcomposer.org/installer', 'composer-setup.php');"
php -r "if (hash_file('sha384', 'composer-setup.php') === 'a5c698ffe4b8e849a443b120cd5ba38043260d5c4023dbf93e15
php composer-setup.php
php -r "unlink('composer-setup.php');"
```

This installer script will simply check some [php.ini] settings, warn you if they are set incorrectly, and then download the latest

001.- Curso Intensivo Laravel PHP

Curso Laravel 5 desde

Laravel es un framework de código abierto para desarrollar aplicaciones y servicios web con PHP 5 y PHP 7. Su filosofía es desarrollar código PHP de forma elegante y simple, evitando el "código espagueti". Fue creado en 2011 y tiene una gran influencia de frameworks como Ruby on Rails, Sinatra y ASP.NET MVC. Wikipedia

Installing Laravel

Laravel utilizes <u>Composer</u> to manage its dependencies. So, before using Laravel, make sure you have Composer installed on your machine.

Via Laravel Installer

First, download the Laravel installer using Composer:

composer global require laravel/installer

Make sure to place Composer's system-wide vendor bin directory in your §PATH so the laravel executable can be located by your system. This directory exists in different locations based on your operating system; however, some common locations include:

• macOS and GNU / <u>Linux Distributions: \$HOME/.config/composer/vendor/bin</u>

O Windows: %USERPROFILE%\AppData\Roaming\Composer\vendor\bin

Vamos a crear la base de datos, puede usar cualquier base de datos mysql, postgres, mongodb...

Creamos la db

Crean una tabla llamada users de 6 columnas (importante dejarle el nombre users) ya que todo esta apuntado a este nombre si quieren cambiar el nombre deben hacer otros pasos

El modelo user utilizará por defecto la tabla users. Si se quiere especificar otro nombre para la tabla, se le puede definir el nombre a usar en app\User.php con el siguiente código:

```
protected $table = ''; // colocamos el nombre de la tabla
...
```

Estructura de tabla 🔑 Vista de relaciones

#	Nombre	Tipo	Cotejamiento	Atributos	Nulo	Predeterminado	Comentarios	Extra
1	id 🔑	int(11)			No	Ninguna		AUTO_INCREMENT
2	name	varchar(100)	utf8mb4_spanish_ci		No	Ninguna		
3	email	varchar(200)	utf8mb4_spanish_ci		No	Ninguna		
4	password	varchar(200)	utf8mb4_spanish_ci		No	Ninguna		
5	updated_at	timestamp			No	current_timestamp()		ON UPDATE CURRENT_TIMESTAMP()
6	created_at	timestamp			Sí	NULL
